

A Better Sets Approach Algorithm for the Determination of Component Minimal Complete Subgraph

Silviu Bârză

Faculty of Mathematics and Informatics, Spiru Haret University, Bucharest

Abstract: Giving a graph G we wish to determine the component minimal complete subgraph of G . For this goal we present an algorithm in terms of sets representation of graph G . We give too the theorem that characterized this algorithm which is a better algorithm then the two algorithms presented in an anterior paper and we show that this one is better.

Keywords: subgraphs, complete graphs
